DETAILED ACTION

Applicant's election with traverse of Group I with species (A) in the reply filed on 9/8/04 is acknowledged. The traversal is on the ground(s) that the language of each of claims 1-40 recites a method which produces a polyetherimide. This is not found persuasive because each group requires a different search since the dihydroxy aromatic hydrocarbon and the solvent of group I can be other than bisphenol A, disodium salt and o-dichlorobenzene or anisole of group II.

The requirement is still deemed proper and is therefore made FINAL.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-37 with species (A) are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Schmidhauser'974 of record on 1449.

The reference discloses that aromatic polyether polymers are prepared by a phase transfer catalyzed reaction between equimolar amounts of at least one alkali metal salt of a dihydroxy substituted aromatic compound and at least one substituted

aromatic compound such as bis[N-(chlorophthalimido)] benzene, in a monoalkoxybenzene such as anisole as diluent and in the presence of a phase transfer catalyst, preferably a hexaalkylguanidinium salt (see Abstract and at col. 1, line 61 et seq.).

The disclosure of the reference differs from the instant claims in that it does not disclose that the reaction mixture contains at most 20 ppm by weight of water.

The composition disclosed by the reference is prepared from reactants and under process conditions that are inclusive of the claimed reactants and conditions. In view of this similarity, it would appear to be inherent that the claimed condition, the reaction mixture contains at most about 20 ppm by weight of water, could be prepared following the teachings of the reference. See *In re Best*, 195 USPQ 430, 433 (CCPA 1977).
